REVOLV

SECURITY BECOMES IT READY

 harmonize SOFTWARE SUITE

REVOLV has been built with one goal: to deliver an hHCI platform that is truly built to make security IT ready. Whether you choose DEEPSTOR® with a single SAN or DEEPSTOR+® with our dual mirrored SAN technology, you will be using a system built with powerful components and a software suite designed with the user in mind.

HARMONIZE Conductor allows the user to manage the entire system from within the video management system.
HARMONIZE Templates for easily configuring VMS to new VM.
HARMONIZE HealSys to watch over critical components and provide warnings through the VMS, including predictive drive failure, CPU and RAID monitoring, and more.

Each part of the HARMONIZE Software Suite optimizes REVOLV and brings you a system that gives you more: more tools, more control, and more peace of mind.

An investment into an hHCI system can be financially daunting and practically concerning. With REVOLV and our HARMONIZE Software Suite, you will receive a system that is managed through the familiar video management system GUI, and a system that delivers far more real value than the initial financial investment.

SUITE COMPONENTS

1 HARMONIZE Templates

2 HARMONIZE hHCI

3 HARMONIZE SnapClon

4 HARMONIZE HealSys

5 HARMONIZE P/T Control

6 HARMONIZE Conductor

KEY FEATURES

• Virtualization Optimization for video

• iDRAC management through VMS

• Host failure management

• High Availability ("HA")

• Host load management

• Redundant SAN with simultaneous write when using DEEPSTOR+™ without additional hardware or licensing costs

• Network optimization for video

• Powerful hardware - Intel Gold Xeon processors (20 core, 40 VCPU), 128GB RAM, SAS SSD
