

# BCD's Milestone Systems Appliances

Purpose-built with BCD's exclusive technology

If it is important to reduce hardware need, have manageability to the desktop, and eliminate third-party gateways to offset storage with disaster recovery to the cloud, then you must see the following three technologies that come with BCD's servers that you cannot get on any other hardware platform, including Dell or Milestone.

## BCDVIDEO ACCELERATOR

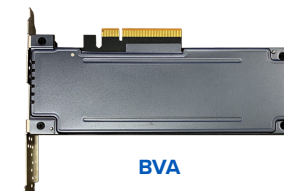

The BCDVideo Accelerator (BVA) is a cutting-edge storage accelerator card that sits in a server's PCI bus, freeing up drive bays that are used for "live drives." With the BVA equipped, you can increase your customers' storage needs resulting in greater storage scalability, performance, and reliability for project sites running XProtect® VMS. Milestone Systems appliances utilizing this technology can standardize archiving video every two hours as a best practice, without negatively impacting the live video database's performance.

### Benefits

- Revolutionizes Milestone Systems technology
- Eliminates disk i/o bandwidth bottlenecks
- Increases throughput and storage scalability

## HARMONIZE IDRAC FOR MILESTONE XPROTECT®

BCD's exclusive Harmonize iDRAC plug-in for Milestone Systems XProtect® gives users an easy-to-use tool that proactively monitors servers and predicts hardware failures seamlessly within XProtect while also sending notifications right to the desktop.

Watch the [demo video here](#) to see just how simple it is to manage your system from the desktop!

## HARMONIZE BRIDGE, POWERED BY TIGER TECHNOLOGY

BCD's hybrid cloud connectivity offering, Harmonize Bridge, provides security customers with a simple software add-on to connect Milestone Systems' XProtect® VMS to any cloud provider for data protection and storage extension to the cloud. This cost-effective solution allows users to leverage the processing power of the cloud without any disruption to existing applications or daily workflows. Eliminate third party gateways and additional hardware while managing everything through XProtect!

Watch this [explainer video](#) to see how it works!

# BCD's Milestone Systems Appliances

Purpose-built with BCD's exclusive technology

FEATURE	WHY IT MATTERS
<b>Longevity</b>	Milestone partner since 2009, former Technology Partner of the Year
<b>iDRAC to the Desktop</b>	Brings the server management to the site administrator's desktop via XProtect
<b>BCD iDRAC for Windows 10</b>	Brings iDRAC functionality to all Windows 10 and Windows 11-based systems
<b>Enterprise TeamViewer License</b>	Allows for instantaneous troubleshooting to maximize uptime
<b>Harmonize Bridge</b>	All systems have hybrid cloud functionality. Delivers instantaneous cloud connectivity and built-in disaster recovery
<b>BVA Accelerator</b>	On those systems needing more than two high-speed drives, this replaces those, opening up drive bays for storage, and delivers 135,000 IOPS
<b>System Builder Program</b>	As a Milestone official system builder, our systems take 15 minutes or less to install, versus the standard 2-4 hours from an off-the shelf server
<b>OTFD</b>	We ship systems within days, not weeks or months
