

The BCD Value for Government and Military Facilities

The Need for Video Surveillance in Federal Establishments

The entities that protect the general public, such as military bases, federal buildings and municipalities require constant video surveillance to secure facilities. From threat detection to increased incident response time, there is a constant need for video surveillance to improve situational awareness. Government and military facilities require durable, scalable solutions that can endure extreme environmental and mechanical stresses as well as provide real-time insights on their surrounding environments.

Benefits of BCD for Government and Military Projects

As one of the industry leaders for providing IP video data infrastructure solutions, BCD offers a wide range of solutions that tailor to the needs of government and military facilities. While each solution is purpose-built in one of our ISO 9001:2015 certified facilities, all BCD systems have the following attributes in common:

- NDAA, TAA and BAA compliant PoE network and video recording appliances
- Cyber-hardened hardware, backed by BCD's cybersecurity assurance
- Validated with top VMS, video analytics and access control solutions
- [Harmonize Bridge](#) integration for hybrid cloud connectivity and disaster recovery
- [Harmonize RMM](#) for full system health monitoring and predictive failure
- 24/7/365 pre- and post-sales support

Recommended Solutions

vSTORE High-Availability Virtualized Infrastructure

Virtualizing your hardware is an incredible way to optimize your system resources in a shared, virtual environment and reduce ownership and investment costs of additional hardware. Virtualization also provides [high-availability and automatic failover](#), ensuring your data is always accessible and secure.

Harsh Environment Servers and Switches

From extreme temperatures to mechanical stressors like strong vibrations, or even explosions, video recording and network appliances need to be able to withstand the constraints of their environments. BCD offers a range of [harsh environment servers](#) and [hardened switches](#) that are ideal for vehicles and extreme conditions.
