

BCD Harmonize iDRAC Plug-In Installation Guide

Before You Begin

- You should install the plugin server component before installing the client components.
- Installing the plugin server component will temporarily stop and then re-start the XProtect Event Server, so schedule installation accordingly.

Getting Started

1. Locate the directory path where the zip file containing the Harmonize iDRAC plugin is stored.
2. Extract the zip to a desired path
3. There will be 2 files contained within the folder created in step 2

Name	Date modified	Type	Size
Harmonize.msi	9/15/2020 10:21 AM	Windows Installer	2,682 KB
setup.exe	9/15/2020 10:21 AM	Application	540 KB

Installation

HarmonizeInstaller.msi is used for both server and client component installation. Prepare by copying the HarmonizeInstaller.msi file to the server, and any workstations that are running the XProtect Smart Client and XProtect Management Client applications.

Server

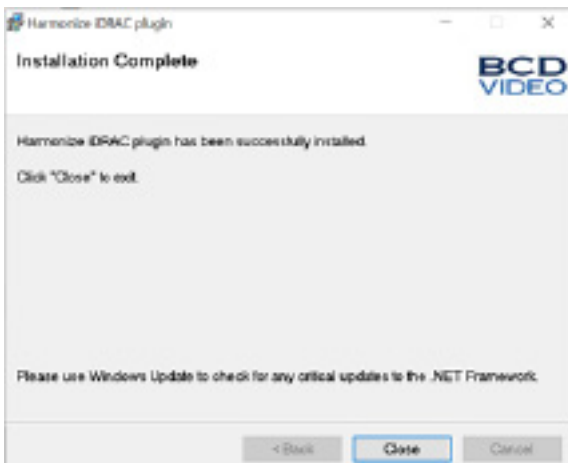

On the recording server, run the installer. It will automatically detect the presence and location of the relevant XProtect folders and install the necessary files.

Follow the guide to complete the installation.

Clients

On machines running the XProtect Smart Client and/or the XProtect Administration Client, you must run the HarmonizeInstaller.msi to access the iDRAC plugin functionality.

- Shut down client applications before running the installer.
- Launch the HarmonizeInstaller.msi installer
- Follow the guide to complete the installation
